

Vasista Sandeep Srinivasa

Platform Product Leader & Technical Program Manager

Bengaluru, India | contact@vasistasandeep.in | [linkedin.com/in/vasistasandeep](https://www.linkedin.com/in/vasistasandeep) | vasistasandeep.in

EXECUTIVE SUMMARY

Platform Product Leader and Technical Program Manager with 14+ years of experience engineering resilience and scale for global distributed systems. Specialized in OTT media supply chains, high-concurrency live streaming (30M+ users at 250K RPS), and full-stack observability. Proven track record of originating platform strategy, decoupling legacy monoliths, and establishing architectural governance (GDFO) to ensure 99.99% uptime during global sports events.

CORE COMPETENCIES

- Platform & Architecture:** Distributed Systems, Microservices, Server-Side Ad Insertion (SSAI), Multi-CDN Shielding, GDFO (Graceful Degradation).
- Observability & Telemetry:** OpenTelemetry (OTel), Datadog, Prometheus, Grafana, Tail-Based Sampling, SLI/SLO Governance, MELT.
- Product Strategy:** Build vs. Buy Trade-offs, Multi-Region Expansion (GDPR, US, Japan data residency), Cost vs. Latency Optimization.

PROFESSIONAL EXPERIENCE

Sony Pictures Networks India

AVP, Program Management (Tech & Product)

- Originated Platform Modernization:** Authored the business and technical vision to replace legacy third-party vendors with a proprietary in-house CMS engine ('Bolt'), driving a 40% reduction in content publishing latency and saving multi-millions in OPEX.
- Governed High-Concurrency Live Scale (30M+ Users):** Directed tournament engineering readiness for global events (UEFA, Australian Open, Bilateral Cricket). Sustained 250K RPS surges with 99.99% uptime by enforcing strict token-bucket edge rate limiting and Redis cluster pre-warming.
- Established GDFO via Architecture Control Committee:** Formed the ACC governance framework to manage error budgets. Implemented automated circuit breakers (Envoy/Resilience4j) on non-critical endpoints to guarantee 100% core playback continuity during unpredictable traffic spikes.
- Proactive Systemic Risk Discovery:** Conducted independent telemetry audits ahead of major live events to map unknown vulnerabilities, discovering a 3-minute auto-scaling provisioning lag. Designed Edge-to-Persistence failover policies that completely mitigated this lag, protecting live ad monetization.
- Multi-Region Compliance Expansion:** Architected regional data isolation boundaries at the Gateway layer, enabling the platform's multi-territory rollout across North America, Europe (GDPR), and Japan while strictly isolating PII and subscription state.

Walmart Global Tech

- FinTech Data Pipeline Re-engineering:** Led the product roadmap for automated financial audit platforms, transitioning manual post-payment audit processes into real-time streaming ML anomaly detection pipelines.
- Revenue Recovery:** Utilized Kafka event streams and Elasticsearch/Splunk log aggregation to isolate transaction anomalies, recovering millions of dollars in leaked revenue annually.
- Executive Influence:** Presented real-time financial data models and system health trade-offs to executive boards, securing buy-in for continuous tech-debt remediation alongside feature delivery.

EDUCATION & CREDENTIALS

- MBA in E-Business & PG in Big Data Analytics
- Project Management Professional (PMP®)
- Lean Six Sigma Black Belt (LSSBB) & Green Belt (KPMG)
- Certified ScrumMaster (CSM®) & Certified Scrum Product Owner (CSPO®)
- SAFe® 5 DevOps Practitioner & ITIL® Certified
